

ABSTRACT OF THE DISCLOSURE

A personal air cleaning apparatus which draws in, in a concentrated fashion, air present in a contaminated zone, and outwardly discharges the air to a clean zone after the air has been filtered. The apparatus includes a sucking/discharging unit having a suction port for sucking in contaminated air, and a discharge port for discharging filtered air, a filter for outwardly discharging air received from the sucking/discharging unit while supplying clean air via the sucking/discharging unit, a conduit for connecting the sucking/discharging unit to the filter, and a position determining member arranged around the conduit unit and adapted to allow the conduit unit to be bent without being folded, while fixing the position of the sucking/discharging unit.
